

determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. See § 416.905. Your impairment must result from anatomical, physiological, or psychological abnormalities which are demonstrable by medically acceptable clinical and laboratory diagnostic techniques. See § 416.908.

EFFECTIVE DATE NOTE 2: At 62 FR 13538, Mar. 21, 1997, § 416.927 was amended by correcting paragraph (a)(1), effective Apr. 14, 1997.

§ 416.928 Symptoms, signs, and laboratory findings.

Medical findings consist of symptoms, signs, and laboratory findings:

(a) *Symptoms* are your own description of your physical or mental impairment. If you are a child under age 18 and are unable to adequately describe your symptom(s), we will accept as a statement of this symptom(s) the description given by the person who is most familiar with you, such as a parent, other relative, or guardian. Your statements (or those of another person) alone, however, are not enough to establish that there is a physical or mental impairment.

(b) *Signs* are anatomical, physiological, or psychological abnormalities which can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena which indicate specific abnormalities of behavior, affect, thought, memory, orientation and contact with reality. They must also be shown by observable facts that can be medically described and evaluated.

(c) *Laboratory findings* are anatomical, physiological, or psychological phenomena which can be shown by the use of a medically acceptable laboratory diagnostic techniques. Some of these diagnostic techniques include chemical tests, electrophysiological studies (electrocardiogram, electroencephalogram, etc.), roentgenological studies (X-rays), and psychological tests.

[45 FR 55621, Aug. 20, 1980, as amended at 58 FR 47586, Sept. 9, 1993]

§ 416.929 How we evaluate symptoms, including pain.

(a) *General.* In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence, and other evidence. By objective medical evidence, we mean medical signs and laboratory findings as defined in § 416.928 (b) and (c). By other evidence, we mean the kinds of evidence described in §§ 416.912(b) (2) through (6) and 416.913 (b) (1), (4), and (5) and (e). These include statements or reports from you, your treating or examining physician or psychologist, and others about your medical history, diagnosis, prescribed treatment, daily activities, efforts to work, and any other evidence showing how your impairment(s) and any related symptoms affect your ability to work (or if you are a child, your functioning). We will consider all of your statements about your symptoms, such as pain, and any description you, your physician, your psychologist, or other persons may provide about how the symptoms affect your activities of daily living and your ability to work (or if you are a child, your functioning). However, statements about your pain or other symptoms will not alone establish that you are disabled; there must be medical signs and laboratory findings which show that you have a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and which, when considered with all of the other evidence (including statements about the intensity and persistence of your pain or other symptoms which may reasonably be accepted as consistent with the medical signs and laboratory findings), would lead to a conclusion that you are disabled. In evaluating the intensity and persistence of your symptoms, including pain, we will consider all of the available evidence, including your medical history, the medical signs and laboratory findings and statements about how your symptoms affect you. (Section 416.927 explains how we consider opinions of your treating source and other medical opinions on the existence and severity of your symptoms, such as pain.) We
